

Wisconsin Seed Potato Improvement Association

HIGH QUALITY SEED POTATOES FROM WISCONSIN

Crop Year 2020

Recent UW Potato Variety Releases

CHIP

Nicolet: Round-white chipstock with shallow eyes. Full season with good vine growth. Good internal quality, medium to long storage chipping from 48°F. Moderate tolerance to *Verticillium* wilt.

Pinnacle (W5015-12): High-yielding chipstock with somewhat flattened tubers and late maturity. Produces light-colored chips out of cold storage several weeks longer than Snowden. Tolerant to *Verticillium* wilt, susceptible to common scab.

Hodag (W5955-1): Round-white chipstock with high yield potential and common scab resistance. Produces light-colored chips out of cold storage 4-6 weeks longer than Snowden. Larger size profile, with mild hollow heart in oversize tubers in some environments. Specific gravity similar to Snowden.

RED

Red Endeavor (W6002-1R): High-yielding red potato with uniform size, shallow eyes, and color comparable to Dark Red Norland. Skin set is not as good as Norland but better than Chieftain. Good internal quality, scab tolerance, and dormancy.

Red Prairie (W8405-1R): Oblong, high-yielding red variety with smooth skin, shallow eyes, and long dormancy. Skin color comparable to Red Norland but 7-10 days later.

W8893-1R: Early-maturing red variety with very dark skin color and attractive tuber type.

RUSSET

Plover Russet (W9133-1rus): Fresh market russet with early maturity and a high percentage of U.S. #1 tubers due to its large size profile and consistent, blocky shape. Tubers have light russetting, low specific gravity, and long dormancy. Tolerant of common scab but susceptible to *Verticillium*.

W9433-1rus: Bulks very quickly, late vine maturity, good tuber shape, very light russetting.

YELLOW

Oneida Gold (W6703-1Y): Fresh market yellow potato with broader size profile than Yukon Gold and mild netting. Excellent internal quality and modest scab tolerance.

New fresh market varieties from the University of Wisconsin Breeding Program

Plover Russet

(W9133-1rus)

- **High U.S. #1 percentage** due to its large size profile & consistent, blocky shape
- **Early maturity** but also susceptible to *Verticillium*
- **Long dormancy** and storage potential
- **Common scab tolerance**

Red Prairie

(W8405-1R)

- **Smooth skin and shallow eyes**, with slightly oblong tubers
- **High yields** across diverse environments
- **Medium maturity:** 1 week later than Norland varieties
- **Common scab tolerance**
